

Actai WAP Portal

The Actai WAP-Portal engine reduces the efforts for VMNOs and Media Companies to generate and update fully customized device optimized WAP pages with dynamic content drastically. Its build-in ecommerce features support revenue generation through mobile content sales and cross selling.

WAP - Portal Engine

- Customizable Design
- Device-specific rendering
- Flexible Template System for different screen resolutions
- XHTML Encoder / Decoder
- Modular plug-in structure for dynamic content presentation
- Mobile Content plug-in
- DRM
- Pre-Listening
- RSS-Feeds
- Message Store
- WAP Payment
- WAP Menu Plug-In

A customized WAP-Portal or

site is a must now for every VMNO and Website Operator, the fight for the home pages goes mobile. Mobile Internet access through WAP has become increasingly popular driven by new generation of mobile phones with better device screen

resolutions and faster data access combined with lower operator data tariffs.

Successful WAP applications and content require unlike WEB based offerings device specific page generation. The Actai WAP-Portal engine reduces the efforts for VMNOs and Media Companies to generate and update fully customized device optimized WAP pages with dynamic content drasti-

cally. Its build-in ecommerce features support revenue generation through mobile content sales and cross selling.

The design of the portal can be defined by XHTML templates and stylesheets for the different screen resolutions. Dynamic content is generated by the Dynamic Content Plugins. The XHTML Decoder / Encoder engine generates the final WAP pages by merging the resolution specific template with the XHTML output from the Dynamic Content Plugins. Multiple Plugins are available for presentation of Mobile Content, News and Multimedia Message Objects.

WAP Menu Plug-In

The WAP Menu Plugin provides a configurable menu structure for the WAP Portal. It is defined in XML Format and allows to redirect in coming requests to the Dynamic Content Plugins. The plug-in is part of the Template Architecture and the

layout can be designed by stylesheets.

mobilephone will be displayed.

MSGStore elements like MMS or News Messages via a specific query syntax.
